## Ash Grove® Blacktop Patch

**Ash Grove® Blacktop Patch is an easy, ready-to-use asphalt mix designed and manufactured for patching and repairing potholes, cracks and seams in blacktop driveways, walks and parking lots**

No mixing, heating or preparation — just place in the hole or crack and compact with a tamp or plate compactor to form a firm and durable patch. Recommended for repairing blacktop surfaces of driveways, walkways, parking lots, cracks,

potholes and loading areas. Ash Grove® Blacktop Patch has several advantages including no mixing required, all weather formula enables repairs in any weather condition, open to traffic immediately after thorough compaction and reduces downtime with rapid repairs. One 60 lb bag will yield approximately 0.38 cu ft when properly compacted and will cover an area of approximately 4.8 sq. ft. at a thickness of 1 inch. No special curing is required. Traffic may begin immediately after leveling and compaction are preformed.

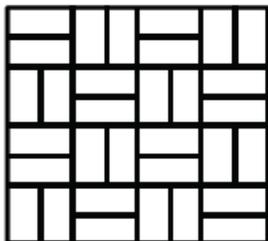

### Features, Benefits & Procedures

Prior to application, chisel any loose blacktop from the opening so that all sides of the hole or crack are square to allow for proper bonding of the patch.

Pour the Ash Grove® Blacktop Patch into the hole or crack under repair. Fill the opening and spread Blacktop Patch to a level of about one inch higher than the surrounding surface area.

Compact the patch to a level surface with a tamper or a piece of plywood may be laid over the patch and driven over with a car wheel. Under certain conditions, the surface may remain tacky for a short period of time. If this occurs, spreading a light layer of sand or Portland cement may be helpful.

Do not apply driveway sealer to the patched area for 60 to 90 days. Compaction of the patch is critical.

### TEMPLATE SALE

Our Kolorstone template sale continues till the end of June. Order any of our in stock templates at 33% off regular price. Contact our office for availability and pricing. (402) 727-7525
